Core Dispatcher

Outbound Flow

WorklistEventHandler

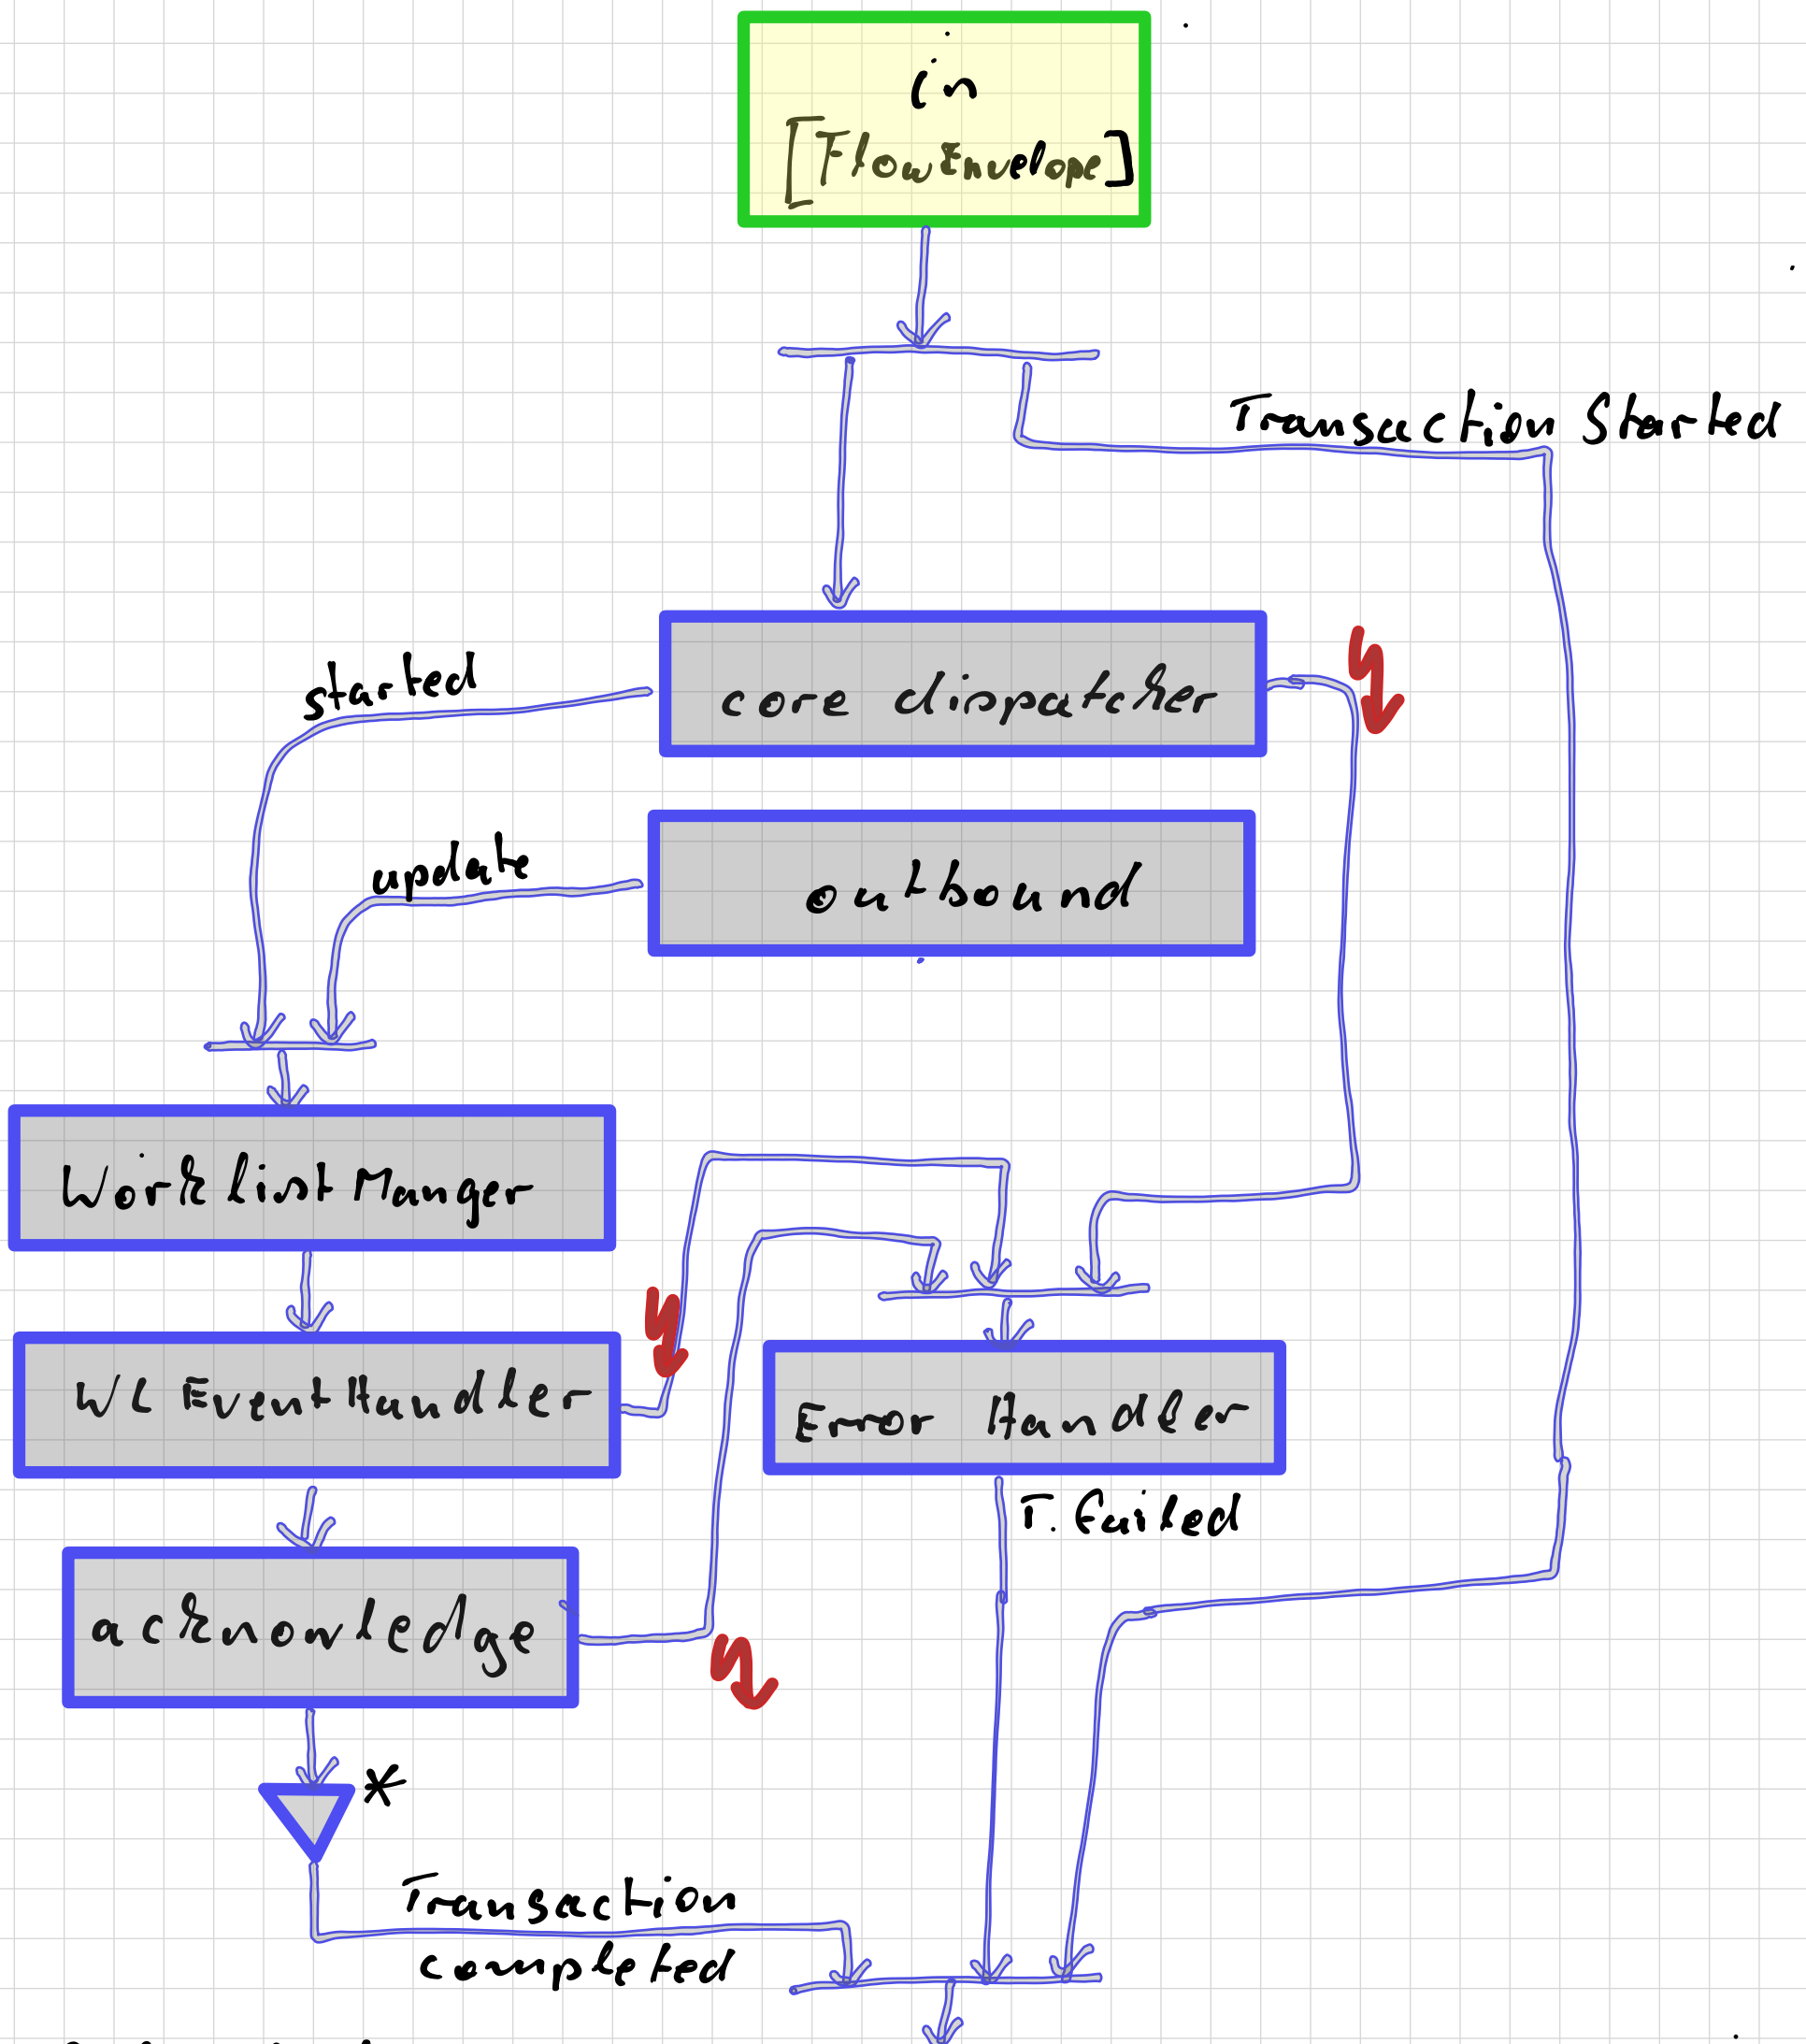

The WL Event Handler takes all Events which potentially complete a worklist. Either it has been completed successfully, failed or has timed out.

Upon successful completion the FlowEnvelope that has initiated the worklist will be acknowledged. In case the acknowledge fails, the envelope is marked with an exception and is subject to error handling.

Upon unsuccessful completion, a Transaction failed event is passed downstream.

Dispatcher with outbound

- * Only if the WL has 1 Element AND the outbound target is for the internal SMS provider
